### Description

The **Duo Tech** and **Scindo Tech** systems were for the first time presented in 2008 at the fair in Düsseldorf. The **Duo Tech** system combines the classical wire and aluminium with one goal: to find a permanent solution that allows freedom of design. The **Scindo Tech** system, on the other hand, allows clear and direct presentation of products, as it remains discretely in the background. There are two more systems currently being developed: **Rima Tech** and **Fino Tech** that will add a new dimension to the design of textile stores.
