Description

SB Program (Wanzl)

This program comprises a wide range of shopping carts, shopping baskets, systems for guiding the customer and special sale equipment.

According to the statistic data of the German manufacturer, each European citizen uses the shopping cart three times a week. If we interpolate this data to an individual's life, we can calculate that we use shopping carts 2,500 hours during our lifetime. This is why the German manufacturer is constantly developing, updating and adapting the equipment, thus making sure that customers can enjoy an undisturbed shopping experience, while at the same time ensuring a good sales performance for the seller.

For years these products have met the requirements of the most demanding customers.
